rigging services

Arnoff's rigging division provides professional and experienced services for the relocation, replacement and/or storage of heavy/large items in any shape or form.

Arnoff's experienced riggers will relocate everything from one safe to the contents of an entire plant. Safety is a top priority at Arnoff, and we will ensure that your facility and the items we handle are treated with the utmost sensitivity.

We offer the following services:

- Experienced rigging team with all necessary transport & equipment to handle heavy items
- Disassembly and reinstallation
- Relocation locally, long-distance or worldwide
- Storage in temperature or climate control warehouses
- Custom crating
- Cleanroom services

custom crating

Arnoff's custom crates are built to protect your equipment while in transport or storage. We will accommodate any size item, including oversized and heavy.

For crates that are travelling overseas, we use certified heat-treated wood so that your valuable cargo is compliant with international treaties and will not be held up during export. If your cargo is to be shipped in a sea container and is sensitive to moisture, we will seal the contents inside a foil vapor barrier bag.

shipping services

When shipping is required, Arnoff will handle all of the logistics, whether domestic or international destinations.

- Prepare items for transport, including shrink wrapping, padding, crating or palletizing
- Arrange for all logistics and delivery to destination
- Supply rigging team at origin to load, and if required, at destination to offload

industrial storage

If you require storage for either short or long-term, Arnoff's dry, secure facility offers storage solutions for all kinds of industrial equipment.

- Temperature and climatic-controlled warehouse environments
- Ground and dock level access
- Loading and unloading equipment and staff
- Palletized storage, racking and industrial storage

semiconductor equipment

Arnoff specializes in the handling of semiconductor equipment and relocating this sensitive equipment.

- Clean room certified
- Air-ride climate trailers for transport
- Custom crating, including vapor barrier
- Nitrogen-purge system available for semiconductor equipment (only facility on East Coast with this capability)
